

(a) Domain-averaged flushing, static wedge
solid: nonlinear numerics; dashed: first-order theory

(b) Local concentration, seaward trapping zone
(ξ_t, η_t) = (0.93, 0.50), static wedge

(c) SLR runs, local trapping zone
solid: nonlinear; dashed: quasi-static ansatz; dotted: exact 1st-order

(d) First-order accuracy vs wedge strength
measured validity ceiling for the perturbation theory
